

BUNNIES AND CHICKS

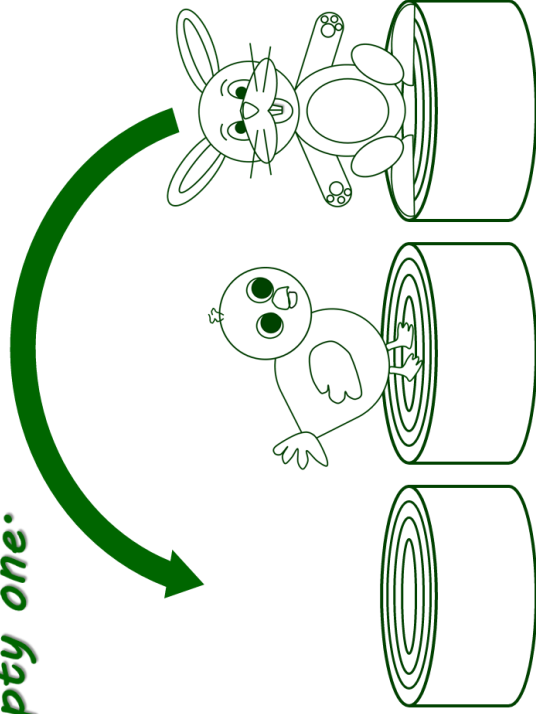

Our bunnies and chicks have ended up with the wrong food. We need to help them swap places.

To get to their correct food, they can:

1. Side-step onto an empty tree stump,

2. Leap-frog over one tree stump to reach an empty one.

What is the least number of moves possible for the chicks and bunnies to swap places?

(Try to record the way you explore this investigation and note any light bulb moments or times when you felt stuck.)

Cut out the bunny and chick counters and place them on the tree stumps to begin.
